

## **Camp Sunrise COVID-19 Protocol**

We are excited to hold camp in-person again in 2022! Maintaining the safety of our campers and staff is our top priority. Considering the evolving situation with COVID-19, we will adhere to the following safety protocol the week of camp.

### **Vaccination Requirement**

- We require that all staff, campers, and day volunteers are fully vaccinated and up to date with the COVID-19 vaccination.
- A person is considered fully vaccinated and up to date if they have received all recommended doses in the primary series and one booster vaccination when eligible.
- Please refer to the [CDC guidelines](#) for the current recommendations depending on your age and health status.

### **Testing**

- All staff and LITs will be tested upon arrival the day of staff orientation.
- All day volunteers will be tested daily upon arrival.
- Campers will have two testing options:
  - Option 1: A negative PCR test within 72 hours of camp
  - Option 2: Camp medical personal will administer antigen nasal swab rapid tests at registration on Sunday morning.

### **COVID-19 Cases**

- If a camper or staff presents with any COVID-19 related symptoms during the week of camp, they will be sent home to protect other campers and staff.
- Parents will be notified if a camper or staff test positive for COVID-19. We will inform parents of any close contact the infected individual may have had with their child.
- If three people in a cabin test positive, we will send the entire cabin home to protect other campers and staff.

### **COVID-19 Safety**

- We have modified the schedule to hold as many activities and meals outdoors as possible.
- Activities will be scheduled by cabin building to limit the number of indoor interactions with other individuals.
- Only campers and staff assigned to a given cabin will be permitted to enter that building.
- We will be conscientious about cleaning the facilities and equipment.
